

EMPLOYEES WITH PERMANENT OR TEMPORARY MOBILITY CONCERNS

EMERGENCY EVACUATION TIPS

Please become familiar with the exit routes and shelter locations for your area. Workplace emergencies may arise that require movement away from your work station. Examples include evacuation in the case of fire or moving to a designated tornado shelter.

If you will experience mobility challenges in an emergency:

1. Consult with the ES&H Medical Department. Disclose and document your permanent or temporary mobility challenges.
2. Communicate with your supervisor to develop emergency evacuation options that address your mobility needs. Your supervisor will address your mobility issues with the Senior Safety Officer (SSO) and the local Emergency Warden.
3. Become familiar with evacuation and emergency procedures for areas of the Lab other than your immediate work area.
 - a. Locate exits, shelter sites and escape routes.
 - b. When in doubt, ask questions of site residents, instructors, seminar/event facilitators.

Evacuation placards are posted by elevators.
